Fedor Lisin

Data Scientist

Moscow, Russia RU

theo.lisin@gmail.com +7 (999) 249-01-10
TheoLisin @TedFox theo-lisin

It took me around two years to realise that I like programming in general and data science in particular. Since taking the Yandex classes, well-written, readable code has become my intention. My current focus is creating products that benefit or facilitate the lives of people, not just reviewers.

SKILLS

ML and Data Science
Intermediate

sklearn · PyTorch · statistics · linear algebra

Python Development
Intermediate

FastAPI · Pydantic · ORM · SQLAlchemy · ML frameworks

CI/CD
Beginner

Docker · Docker Compose · Github Actions · Gitlab Pipelines

C/C++
Beginner

Common

VSC · Gitlab · Github · Reviewing · Linux

WORK EXPERIENCE (3)

Data Scientist at Huawei — **2024 - Current**

Research on ways to improve the quality of service (QoS) in Wi-Fi systems with Federated learning.

Python Developer at Supervisely OÜ — **2023 - 2023**

Create a new app on the Supervisely platform and provide client tech help.

- Developed new SOTA model training and serving applications for the Supervisely ecosystem (PIPs, YOLO, MMDetection, MixFormer etc.).
- Enhanced capabilities of the SDK: support for point and object tracking with NN models and linear interpolation
- Provided platform users with technical support

Junior Data Scientist at OCRV, Russian Railways affiliated company — **2021 - 2022**

Developed different models from scratch for tabular data and time series, upgraded the current data infrastructure, supervised the students' self-study pet projects.

- Train delay investigation system: improving data infrastructure, time to create the final dataset was at least cut in half. (Catboost, SQL, ClickHouse)
- EEG motor imaginary classification: examining the primary methods for getting, classifying, and filtering EEG data, as well as developing experimental data collection methods. (ICA, SSP, WPD)
- Recommendation system for ticket sales (students project): aided students in using their repository and fixed django framework issues. (Git, Conda, Django)

PROJECTS (2)

Voice emotion recognition using Wav2Vec — **2021 - 2021**

https://github.com/TheoLisin/Emotion_Recognition_with_Wav2Vec

Wav2Vec · transformers · telegram-api

Speech emotion recognition model based on Wav2Vec with telegam-bot user interface.

- Trained 8-class classifier on RAVDESS dataset using Wav2Vec pre-trained model.
- Developed a Telegram bot to gather more data and test the model on Russian speech.

Monotone Hurwitz numbers in genus zero — **2019 - 2020**

mathematical physics · graph theory

University-authored bachelor's thesis

EDUCATION (2)

Bachelor Theoretical Physics at St. Petersburg Academic University of RAS — **2016 - 2020**

Data Science, MLOps at MADE Data Academy — **2022 - 2023**

CERTIFICATES

Machine learning | course authored by Stanford University — **2020-07-25**
Coursera, Stanford University

https://coursera.org/share/fcf17fea90f4868b828c71c2cad3ff7c

Machine Learning Engineer — **2023-07**
MADE Data Academy

https://data.vk.company/curriculum/certificates/download/12961/f84e3606-6030-4ce7-895f-4b2defe55aff/
