🗣️ TheoLisin 🐦 @TedFox 🌐 theo-lisin

It took me around two years to realise that I like programming in general and data science in particular. Since taking the Yandex classes, well-written, readable code has become my intention. My current focus is creating products that benefit or facilitate the lives of people, not just reviewers.

SKILLS

ML and Data Science

Intermediate

- sklearnPyTorchstatistics
- linear algebra

Python Development

Intermediate

- FastAPIPydanticORM
- SQLAlchemyML frameworks

CI/CD

Beginner

- DockerDocker Compose
- Github ActionsGitlab Pipelines

C/C++

Beginner

Common

- VSCGitlabGithub
- ReviewingLinux

WORK EXPERIENCE (2)

Python Developer at Supervisely OÜ 2023 - Current

Create a new app on the Supervisely platform and provide client tech help.

- Developed new SOTA model training and serving applications for the Supervisely ecosystem (PIPs, YOLO, MMDetection, MixFormer etc.).
- Enhanced capabilities of the SDK: support for point and object tracking with NN models and linear interpolation
- Provided platform users with technical support

Junior Data Scientist at OCRV, Russian Railways affiliated company 2021 - 2022

Developed different models from scratch for tabular data and time series, upgraded the current data infrastructure, supervised the students' self-study pet projects.

- Train delay investigation system: improving data infrastructure, time to create the final dataset was at least cut in half. (Catboost, SQL, ClickHouse)
- EEG motor imaginary classification: examining the primary methods for getting, classifying, and filtering EEG data, as well as developing experimental data collection methods. (ICA, SSP, WPD)
- Recommendation system for ticket sales (students project): aided students in using their repository and fixed django framework issues. (Git, Conda, Django)

PROJECTS (2)

Voice emotion recognition using Wav2Vec 2021 - 2021

🔗 https://github.com/TheoLisin/Emotion_Recognition_with_Wav2Vec

- Wav2Vectransformerstelegram-api

Speech emotion recognition model based on Wav2Vec with telegam-bot user interface.

- Trained 8-class classifier on RAVDESS dataset using Wav2Vec pre-trained model.
- Developed a Telegram bot to gather more data and test the model on Russian speech.

Monotone Hurwitz numbers in genus zero 2019 - 2020

- mathematical physicsgraph theory

University-authored bachelor's thesis

EDUCATION (2)

Bachelor Theoretical Physics at St. Petersburg Academic University of RAS 2016 - 2020

Data Science, MLOps at MADE Data Academy 2022 - 2023

CERTIFICATES

Machine learning | course authored by Stanford University

Coursera, Stanford University

🔗 <https://coursera.org/share/fcf17fea90f4868b828c71c2cad3ff7c>

Machine Learning Engineer

MADE Data Academy
