🐙 [TheoLisin](#) 🐦 [@TedFox](#) 🌐 [theo-lisin](#)

It took me around two years to realise that I like programming in general and data science in particular. Since taking the Yandex classes, well-written, readable code has become my intention. My current focus is creating products that benefit or facilitate the lives of people, not just reviewers.

SKILLS

ML and Data Science

Intermediate

sklearn PyTorch statistics
linear algebra

Python Development

Intermediate

FastAPI Pydantic ORM
SQLAlchemy ML frameworks

CI/CD

Beginner

Docker Docker Compose
Github Actions Gitlab Pipelines

C/C++

Beginner

Common

VSC Gitlab Github
Reviewing Linux

WORK EXPERIENCE (3)

Python Developer at Huawei 2024 - Current

Research on ways to improve the quality of service (QoS) in Wi-Fi systems.

Python Developer at Supervisely OÜ 2023 - 2023

Create a new app on the Supervisely platform and provide client tech help.

- Developed new SOTA model training and serving applications for the Supervisely ecosystem (PIPs, YOLO, MMDetection, MixFormer etc.).
- Enhanced capabilities of the SDK: support for point and object tracking with NN models and linear interpolation
- Provided platform users with technical support

Junior Data Scientist at OCRV, Russian Railways affiliated company 2021 - 2022

Developed different models from scratch for tabular data and time series, upgraded the current data infrastructure, supervised the students' self-study pet projects.

- Train delay investigation system: improving data infrastructure, time to create the final dataset was at least cut in half. (Catboost, SQL, ClickHouse)
- EEG motor imaginary classification: examining the primary methods for getting, classifying, and filtering EEG data, as well as developing experimental data collection methods. (ICA, SSP, WPD)
- Recommendation system for ticket sales (students project): aided students in using their repository and fixed django framework issues. (Git, Conda, Django)

PROJECTS (2)

Voice emotion recognition using Wav2Vec 2021 - 2021

🔗 https://github.com/TheoLisin/Emotion_Recognition_with_Wav2Vec

Wav2Vec transformers telegram-api

Speech emotion recognition model based on Wav2Vec with telegam-bot user interface.

- Trained 8-class classifier on RAVDESS dataset using Wav2Vec pre-trained model.
- Developed a Telegram bot to gather more data and test the model on Russian speech.

Monotone Hurwitz numbers in genus zero 2019 - 2020

mathematical physics graph theory

University-authored bachelor's thesis

EDUCATION (2)

Bachelor Theoretical Physics at St. Petersburg Academic University of RAS 2016 - 2020

Data Science, MLOps at MADE Data Academy 2022 - 2023

CERTIFICATES

Machine learning | course authored by Stanford University

Coursera, Stanford University

🔗 <https://coursera.org/share/fcf17fea90f4868b828c71c2cad3ff7c>

Machine Learning Engineer

MADE Data Academy

🔗 <https://data.vk.company/curriculum/certificates/download/12961/f84e3606-6030-4ce7-895f-4b2defe55aff/>

LANGUAGES

English

Intermediate

Russian

Native Speaker

INTERESTS
